

Picture 1

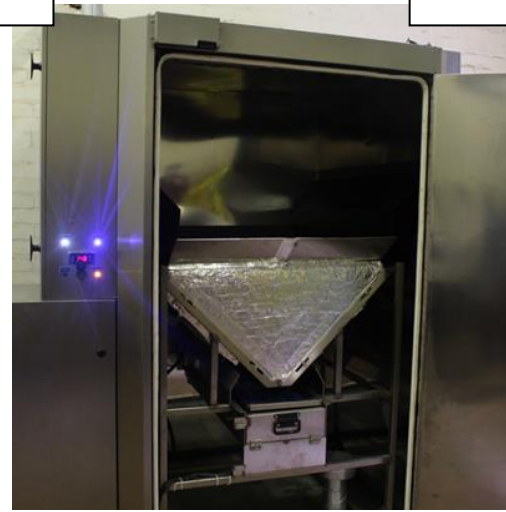

Instrument trays are wrapped in single-use barrier wrap prior to sterilisation. Once sterilised and quality checked, the trays are sent for use in Theatre.

Picture 2

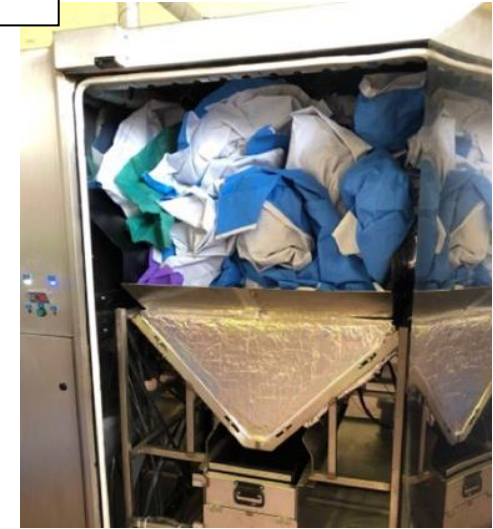

Single-use barrier wrap upon return to Sterile Service. Uncontaminated wraps are segregated for Sterimelt.

Picture 3

Inside of the Sterimelt machine, ready to use.

Picture 4

The Sterimelt machine is filled with uncontaminated wraps.

Picture 5

The wraps are heat densified during a 1.5 hour (approximate) cycle.

Picture 6

The process results in sterile, inert, briquettes.
